

## ZEROPLUS “Qi” protocol digital measurement solution

This Qi measurement solution is based on ZeroPlus logic analyzer bus protocol decoding modules. Proven by client that capture & decode the most detailed protocol packet contents to be interested in include “Preamble / Header / Message / Checksum” correctly. By other analysis functions like the “packet list” & “trigger bar”, user can complete complex signal timing analysis tasks, can help early detect and lift the module malfunctions bugs during product design. Ideal for IC vendors, module vendors applying as a debugging tool to any customers design-in projects!
